

Software Developer**Professional Synopsis**

Proactive professional with 7 years of experience in developing applications using Java, Spring Boot Framework, and Node.JS framework, React Framework, Go Lang deployment, and Kubernetes cluster analysis. Aiming to upgrade my technical skill to fulfill business and organization requirements in the most efficient and convenient way.

Technical Skills

| | |
|-------------------------------|--|
| Programming Languages | Java, Go Lang, Java Script |
| Framework | Spring Boot, Nest JS , React JS |
| Technologies | Restful APIs, Web Technologies |
| Build Tool | Maven, NPM |
| Database | Postgres, MongoDB, MySQL, SQL Server |
| Platform Architecture | Docker, Kubernetes |
| Unit testing Framework | Junit |
| Code Quality Testing Tool | SonarQube |
| Build Platform | Jenkins |
| Cloud technology | Azure, IBM Cloud |
| Third-party Interacting class | Rest Template, Web Client, HTTP Services |

Project Details

| | |
|--------------------------------------|---|
| Application packaging and deployment | Package the source file using VB, stage in SCCM, and deploy to the target audience. |
| EPC | Event Publisher and Consumer: A developed tool to push event through topics in ActiveMQ and consume it. It was built in Maven (Java 8 + Spring boot + JPA +Docker). The database used: Postgres (Initially MY SQL) |
| Etihad Airlines | According to Agile methodology, developed features as per the requirements provided by the client such as providing flexibility to the user to travel during the Covid times having minimum contact with other passengers, gamification, expo, etc. |
| TPMG | Development of My doctor mobile app. Analyzing business requirements and splitting them into features in PI planning meeting. Deep diving into feature technical requirements and estimating the stories as per features. Tech used (React JS, Java, Go Lang) |

Organisational Experience

07/2017 to 07/2021: EPC

- Involved in analysis, design, development and implementation of new features for ENS using spring boot restful services. Understanding client requirements and customizing existing features accordingly.
- Used ActiveMQ as architecture. Used maven as a project build tool. Used Java 8, Spring Boot, Micro services for code base development Used Docker for deployment. Junit for unit test cases and SonarQube for code quality and coverage.
- Worked in JSON and XML responses.

07/2021 to 09/2023: Etihad

- Developer Analyzing business requirements and splitting them into features in PI planning meeting Deep diving into feature technical requirements and estimating the stories as per features. Implementing the story's technical requirement in a codebase and deploying it into the dev environment.
- Worked in spring boot and Node JS micro services to build restful APIs. Discussing the issues related to building and deployment with our platform team and resolving them as per our Project Architecture. Used Java 8, Spring Boot, Cloud, Micro services for code base development. Worked in Docker, Kubernetes, Jenkins for Deployment. Junit v4 and v5 for unit test cases and SonarQube for code quality and coverage.
- Worked in JSON and XML responses. Used SOAP UI as well for few web service consumptions. Implemented Reactive programming for high efficiency.

10/2023 to current: TPMG

- Development of My doctor mobile app. Analyzing business requirements and splitting them into features in PI planning meeting. Deep diving into feature technical requirements and estimating the stories as per features. Tech used (React JS, Java, Go Lang).

Academic Qualification

Bachelor in Technology in Civil. Orissa Engineering College.

Personal Minutiae

- Date of Birth : 01-03-1996
- Hobbies : Cricket, Movies

Declaration

I affirm that all the information furnished above are true to the best of my knowledge and belief.
